

PRISM 2.5 11Mbps Wireless Local Area Network PC Card

The Intersil ISL37300P WLAN PC-Card (note 1) is a complete wireless high speed Network Interface Card (NIC) utilizing the Intersil PRISM® 2.5

Direct Sequence Spread Spectrum Wireless Transceiver chip set. It provides a complete PRISM 2.5 reference design evaluation platform of hardware and software to system providers or integrators requiring wireless data communications capability and is ideal for integration into computer platforms.

The Evaluation kit (ISL37300P-EVAL) includes two WLAN PC cards designed to Intersil's PRISM reference design, Microsoft Windows® Driver, Local Area Network evaluation software, PRISM Test Utilities (PTU) (note 2) software and documentation to complete the evaluation. It supports the IEEE802.11b network specification for Direct Sequence Spread spectrum DSSS signaling, providing data rates of 1, 2, 5.5, and 11Mbps. Evaluation kit software updates are available on the Intersil Web Site.

In addition to the evaluation kit, a complete PRISM chipset WLAN reference design package (ISL37300P-CD) is available. It contains all the documentation needed for manufacturing of the PRISM 2.5 PCMCIA wireless network card including: Cadence/Allegro Layout, Gerber files, Concept schematic, Bill of Materials, assembly and mechanical drawings, test plan, and even a copy of the application for FCC equipment authorization. Customers who license the reference design also receive password access to FCC Intersil's Premier Web site for the most current updates on hardware and software.

Packaging

Features

- Certified Under Part 15 to Operate in 2.4GHz ISM Band
- Support for 11, 5.5, 2 and 1Mbps Data Rates
- Supports the IEEE802.11 Direct Sequence Specification
- Driver Supports Microsoft Windows 95, 98, 98SE, 2000, NT and ME
- Supports Dual Diversity Antennas
- Advanced RAKE Receiver Design with Decision Feedback Equalizer Combats Multipath Fading
- Provides Wireless Data Communications at Full Ethernet Speed
- Designed to Fully Support PC-card Defined Mechanical and Environmental Stress Conditions
- Intelligent Power Control, Including IEEE802.11 Power Save Mode
- Complete Reference Design, the ISL37300P-CD is Available to Ensure Minimum Time-to-Market

NOTES:

1. Throughout this document, all references to 'PC card', 'WLAN adapter', 'adapter', or 'card' refer to a card assembly conforming to the mechanical size specifications of the PC card.
2. At present, PTU supports Windows 95, 98 and 98SE. An upgrade is in process which will add support for NT.
3. The range will vary in different operating environments due to effects such as building construction.

Ordering Information

PART NUMBER	DESCRIPTION	CARDS PER KIT
ISL37300P-EVAL	Evaluation Kit	2
ISL37300P-CD	Reference Design	NA

Access Points will be available from a number of suppliers, enabling a totally wireless network solution. Typical operating ranges are shown in Table 1.

TABLE 1. TYPICAL OPERATING RANGE (note 3)

DATA RATE (Mbps)	INDOOR RANGE	OUTDOOR RANGE
11	120 feet (37 meters)	500 feet (152 meters)
5.5	200 feet (61 meters)	800 feet (243 meters)
2	240 feet (73 meters)	1300 feet (396 meters)
1	300 feet (91 meters)	1750 feet (533 meters)

Functional Overview

The WLAN PC-Card is designed to operate in the 2.4GHz ISM frequency band, channels 1 to 11, as specified by the FCC in the USA. The card will also operate on channels 12 through 14, where permitted by local regulatory authorities. Radio equipment must be certified in a country prior to use. Refer to Table 4 for a list of countries and agencies that have approved the ISL37300P-EVAL for operation.

The Intersil PRISM Chip Set allows for high level integration for reduced size, increased throughput, improved radio performance and faster time to market. The WLAN PC card implements DSSS technology providing superior noise and signal jamming immunity including less severe impact from unintentional radiators such as microwave ovens. The user can connect the PC card in an ad-hoc peer to peer networking scheme, allowing for instant network setup in any office environment. By using an access point, the wireless LAN can be set up to allow for a greater number of users to interconnect, and to increase the coverage area. With a portal (i.e. access point), the wireless LAN can be easily connected into an existing wired LAN, allowing for easy expansion of the service.

Compared to the PRISM II chip set, the PRISM 2.5 generation offers:

- Low-loss front end designed for maximum range
- Higher level of chip integration and less peripheral components to reduce material costs
- Support of optional IEEE802.11 Short Preamble for significantly increased data throughput
- Has a Type II PC card form factor

A complete Reference Design for the ISL37300P is available to ensure minimum time-to-market. This information contains details for manufacturing a PC card WLAN assembly, including Gerber PC board files, a Bill of Material with component sourcing, mechanical drawings, a detailed Radio Description with debug directions and a test plan.

The ISL3873 Media Access Controller (MAC) Protocol Handler

The ISL3873 MAC/Baseband Processor and its firmware are responsible for running the IEEE802.11 protocol in the WLAN card. This section describes the IEEE802.11 features that are implemented.

The functions supported by the STA (station) firmware are:

- CSMA/CA (Carrier Sense Multiple Access with Collision Avoidance) with Random Backoff
- WEP Security
- Short/Long Preamble with multirate
- RTS/CTS Handshake (Ready To Send/Clear To Send) and NAV Management (Network Allocation Vector)
- MAC Level Acknowledgments (Media Access Control)
- Re-Transmission of Unacknowledged Frames
- Duplicate Detection and Rejection
- Broadcast and Multicast Frames
- Fragmentation and Re-Assembly
- Power Management (Planned)
- Timestamp Synchronization
- DCF (Distributed Coordination Function)
- Beacon Generation in an Ad-Hoc Network
- Probe Response Generation in an Ad-Hoc Network

Card Information Structure

The standard Intersil WLAN PC card will be supplied with information embedded in the CIS as shown in Table 2. It should be noted that in most systems this information is displayed when the card is inserted. Customization of the CIS for specific customer requirements is available upon request, to enable customer information to be displayed when the card is inserted.

TABLE 2. CIS EMBEDDED INFORMATION

FUNCTION NAME	CONTENT
Manufacturer	Intersil
Product	PRISM 2.5 PCMCIA ADAPTER
Part Number	ISL37300P
Revision String	Eval-Rev-A
Revision #	1.0
Manufacturer ID	000B
Device ID	7300

IEEE802.11 International Agreement and Frequency Assignments

The IEEE802 LAN committee has forged an international agreement providing for wireless data communication standards for the frequency range of 2.4GHz to 2.4835GHz, as allocated by the FCC in the USA, and in the 2.471GHz to 2.497GHz frequency range, as specified by the regulatory authority in Japan. These standards are designed to focus the industry to develop highly integrated, low cost, interoperable WLAN equipment, of which the ISL37300P-EVAL is a prime example.

In the U.S., there are 11 channels specified by the FCC in the 2.412GHz to 2.462GHz range. In Japan, one channel at 2.484GHz is authorized. The ETSI (European) regulatory body conforms to the USA (FCC) channel assignments with the exception that channels 12 and 13 are also allowed. Some countries in Europe, notably France and Spain have unique channel restrictions.

Although information contained in Table 3 is deemed to be accurate, local regulatory authorities should be consulted before using such equipment.

The ISL37300P is shipped with FCC-compliant firmware. In order to ensure regulatory-compliant channel usage in a particular country, special geographic-specific firmware is available for customer production assemblies which restricts channel usage. Examples include ETSI-compliant firmware, etc. Since the end user does not have the ability to alter this firmware, regulatory compliance is ensured

The available channels of operation in the 2.4GHz to 2.4835GHz and 2.471GHz to 2.497GHz ranges are as follows:

TABLE 3. IEEE802.11 CHANNELS

CHANNEL NUMBER	CHANNEL FREQUENCY	GEOGRAPHIC USAGE
1	2412MHz	US, CA, ETSI, MKK
2	2417MHz	US, CA, ETSI, MKK
3	2422MHz	US, CA, ETSI, MKK
4	2427MHz	US, CA, ETSI, MKK
5	2432MHz	US, CA, ETSI, MKK
6	2437MHz	US, CA, ETSI, MKK
7	2442MHz	US, CA, ETSI, MKK
8	2447MHz	US, CA, ETSI, MKK
9	2452MHz	US, CA, ETSI, MKK
10	2457MHz	US, CA, ETSI, MKK, FR, SP
11	2462MHz	US, CA, ETSI, MKK, FR, SP
12	2467MHz	ETSI, FR, MKK
13	2472MHz	ETSI, FR, MKK
14	2484MHz	MKK

KEY:

US = United States, CA = Canada, ETSI = European countries (except France and Spain),
FR = France, SP = Spain, MKK = Japan

Agency and Regulatory Body Approvals

The WLAN PC-Card will comply to the standards shown in Table 4:

TABLE 4. COMPLIANCE STANDARDS

COUNTRY	APPROVAL	NOTES
USA	FCC Part 15, Sec. 15.247, Sec. 15.107 and 15.109	Approved for Intentional Radiators & Computer Peripheral
Canada	ICAN RSS-210	Approved
Europe	EN 60950 EN 301 489-1 V1.2.1 (2000-08) EN 301 489-17 V1.1.1 (2000-09) EN 300 328 Part 1 V1.2.2 (2000-07) EN 300 328 Part 2 V1.1.1 (2000-07)	Designed for compliance
Japan	ARIB STD-T66 ARIB STD-33	Designed for compliance

FCC Information to User

This product does not contain any user serviceable components and is to be used with approved antennas only. Any product changes or modifications will invalidate all applicable regulatory certifications and approvals.

FCC Electronic Emission Notices

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

FCC Radio Frequency Interference statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

Operation of this equipment in a residential area may cause harmful interference in which case the user will be required to correct the interference at his own expense.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

3.3V PC-card Interface Standard

CAUTION: This assembly is designed to operate with a supply voltage of 3.3V in laptop computers supporting the PC card standard.

CAUTION: Do not force engagement of the card in the PC card slot. It is mechanically designed to prevent improper insertion. This card is equipped with a hardware key to prevent insertion into a 5V only slot.

Permanent damage may occur if operated outside of the specified operating limits listed in this document.
